Summary

Software engineer working in **Go, Python, Kafka, Redis and AWS**, with full-stack delivery in **React/TypeScript**. Shipped scalable **event-driven pipelines**, **idempotent order and payment workflows** and a **32M-record production migration**. Hands-on with the **LLM stack** – tool-calling agents, RAG on PostgreSQL/pgvector, structured output and eval-driven guardrails – including a live AI product built and deployed end to end. Strong in **system design (HLD/LLD)**, distributed systems and DSA.

Education

Indian Institute of Technology (BHU), Varanasi — Varanasi, Uttar Pradesh
Bachelor of Technology in Chemical Engineering — *Aug 2021 – May 2025*

Technical Skills

Languages: Go, Python, TypeScript/JavaScript, SQL, C++
Backend: Gin (Go), FastAPI, Express (Node.js), REST API Design, Microservices, WebSockets (Socket.IO), Pydantic, Playwright
Frontend: React.js, Tailwind CSS, HTML5, CSS3, shadcn/ui
AI & LLM: LLM Agents, Tool Calling, RAG, Vector Search (pgvector), Groq API, Prompt Engineering, Structured Output, Evals
Data & Messaging: PostgreSQL, MySQL, MongoDB, Redis (Locks, Pub/Sub, Caching), Kafka, AWS SNS/SQS (Message Queues)
Cloud & DevOps: AWS (ECS, S3, EventBridge, CloudWatch), Docker, Kubernetes, GitHub Actions (CI/CD), Vercel, Linux, Git
AI-Assisted Development: GitHub Copilot, Cursor, Claude Code, ChatGPT, Gemini
Concepts: Distributed Systems, System Design (HLD/LLD), Event-Driven Architecture, Concurrency, Data Structures & Algorithms

Experience

Infinite Locus — Gurugram, India
Software Development Engineer I — *Jul 2025 – Present*

- **Built and owned** an order-automation platform of **15+ Python/Playwright bots** automating sales returns, report extraction and reconciliation across 6+ third-party portals, cutting manual effort by ~**90%** with a 95%+ success rate.
- **Architected** the platform end-to-end (HLD/LLD → production) with **idempotent**, fault-tolerant workflows – Redis locks, batching, retries and **saga-based compensating rollbacks** – so no order or payment is ever processed twice.
- **Developed** an event-driven notification service in Go (Gin) across 3 channels (FCM push, SMTP, WebSocket) over AWS SNS/SQS, with dedicated worker pools for retries and fault isolation, cutting synchronous API response time by **70%**.
- **Delivered** secure payment and auth flows: **webhook-verified** PayPal order state, PDF delivery via access-controlled S3 signed URLs and Redis-based OTP synchronization blocking duplicate and expired logins.
- **Designed** a fault-tolerant **asynchronous sync pipeline** between the internal order platform and external distributor systems (Kafka, MongoDB, Node.js/TypeScript) for exactly-once, near-real-time propagation of order and payment events.
- **Led** a production **data migration of 32M+ records** through a batched, re-runnable four-phase canonical merge, de-duplicating the store master data with **reconciliation-verified zero data loss**, full audit traceability and one-click rollback.

MPYG Private Limited — Remote
Software Engineer Intern — *May 2024 – Jul 2024*

- **Developed** a React.js Yoga Session Planner end to end, driving **76%** higher user engagement and **28%** subscription growth.
- **Implemented** end-to-end auth with **Firebase Authentication** and **JWT route authorization**, securing private routes.
- **Integrated** REST APIs with **Redux Toolkit** state management, handling loading, error and auth states across the app.
- **Shipped** production releases via **Firebase Hosting** and created reusable, responsive UI components with Tailwind CSS.

Projects

Finishh Club [GitHub] | [Live] | *Python, FastAPI, PostgreSQL/pgvector, LLM Agents, RAG, React, Docker* — Sep 2026 – Present

- **Built and deployed** an AI platform that explains Indian mutual funds, IPOs and portfolios in plain English; a scheduled pipeline ingests **200 funds / 290K historical daily NAV rows** from AMFI with duplicate and row-count integrity checks.
- **Engineered** the **Finishh Meter**, a rolling-window return engine that scores every historical holding period (**2,400+ windows per fund in ~4 ms**), precomputed nightly and guarded by database **CHECK constraints**.
- **Built an LLM agent from scratch** (no framework) with tool calling, Pydantic structured output and **hybrid RAG** (full-text + pgvector); numeric facts come only from SQL tools and investment-advice refusal is **enforced in code**, covered by **74 tests** and eval suites.
- **Deployed** on Vercel (Singapore) with Neon PostgreSQL, a Dockerized FastAPI backend, pooled connections and a **GitHub Actions** nightly job for NAV ingest and meter recompute; per-client rate limiting keeps LLM usage within free-tier budgets.

TalkNet [GitHub] | *Node.js, Socket.IO, Redis, MongoDB, Docker* — Feb 2024 – Mar 2024

- **Built** a real-time messaging platform on **Socket.IO** with room-based chat, persistent history, typing indicators, online presence, automatic reconnection and **JWT-authenticated sockets**.
- **Scaled** across Node.js instances using **Redis Pub/Sub** fan-out for cross-instance delivery; containerized with Docker.

Achievements

- **Competitive Programming:** LeetCode **Knight** (max 2,100+), Codeforces **Specialist** (max 1,403); **1,500+** DSA problems solved across LeetCode, Codeforces and GeeksforGeeks.
