Rohit Kumar

Bharatpur, Rajasthan-321402 | +91-8003133605 | rk8091267@gmail.com | LinkedIn | GitHub

Education

Indian Institute of Technology (BHU), Varanasi — Varanasi, Uttar Pradesh
Bachelor of Technology in Chemical Engineering — *Aug. 2021 – May 2025*

Technical Skills

Languages: Golang, Python, JavaScript, C++, SQL
Backend: Go (Gin), Node.js, Express.js, Flask, SQLAlchemy, REST APIs, Microservices, WebSockets (Socket.IO)
Data & Messaging: MySQL, MongoDB (Aggregation Pipelines, Indexing), Redis (Locks, Pub/Sub, Caching), Kafka
Cloud & DevOps: AWS (SNS, SQS, S3, EventBridge Scheduler, CloudWatch, ECS), Docker, Git, Playwright
Concepts: Distributed Systems, System Design (HLD/LLD), Idempotency, OOP, DBMS, , Computer Networks, Data Structures & Algorithms

Experience

Software Development Engineer I — Infinite Locus
Onsite – Gurugram, India — *Jul 2025 – Present*

- **Built & owned** a distributor order automation platform comprising **15+** Python/Playwright bots that automated sales returns, report extraction, and reconciliation across **6+ third-party portals**, reducing manual effort by **90%+** while maintaining a **95%+** production success rate.
- **Architected** the platform end-to-end (**HLD/LLD** → production rollout) with fault-tolerant, **idempotent** workflows using Redis distributed locks, batching, orchestration, retries, and **saga-based compensating rollbacks**, ensuring exactly-once order and financial processing with no duplicate or partial records.
- **Developed** a distributed, event-driven notification platform in Go (Gin) supporting **3 notification channels** (Firebase FCM, SMTP email, and WebSocket). Implemented an **AWS SNS/SQS** messaging pipeline with dedicated worker services for reliable asynchronous processing, retries, and fault isolation, reducing synchronous API response time by **70%** while ensuring scalable and resilient notification delivery.
- **Delivered** secure end-to-end financial workflows, including PayPal payments with webhook-verified state, Go PDF generation served through **access-controlled S3 signed URLs**, and Redis-based OTP synchronization to prevent duplicate or expired logins.
- **Designed and implemented** a fault-tolerant, **event-driven synchronization pipeline** between internal and external distributor management platforms using **Kafka**, **MongoDB**, and **Node.js (TypeScript)**, enabling reliable, idempotent processing of financial and order events with near real-time data consistency.
- **Led** a large-scale production **data migration** of **32M+ records** through a batched, idempotent four-phase canonical merge, de-duplicating the store master with **zero data loss**, full audit traceability, and one-click rollback for safe recovery.

Software Engineer Intern — MPYG Private Limited
Remote — *May 2024 – Jul 2024*

- **Developed** a React.js Yoga Session Planner that increased user engagement by 76% and subscriptions by 28%.
- **Implemented** Firebase Authentication and JWT-based authorization for secure user authentication and session management.
- **Built** reusable responsive UI components using Tailwind CSS and ShadCN UI, improving cross-device usability and maintainability.

Projects

Job Portal [GitHub] | *MERN Stack, Redis, Docker, JWT, MongoDB* — Apr 2024 – May 2024

- **Designed** and developed a scalable full-stack job portal following a layered architecture (Routes → Controllers → Services → Database), supporting role-based workflows for recruiters and candidates.
- **Implemented** JWT authentication with refresh tokens, role-based access control (RBAC), bcrypt password hashing, centralized error handling, request validation, and secure session management.
- **Integrated** Cloudinary for resume uploads, Nodemailer for email notifications, Swagger/OpenAPI for API documentation, and Docker for containerized deployment, improving maintainability and deployment consistency.

TalkNet [GitHub] | *Node.js, Socket.IO, Redis, MongoDB, Docker* — Feb 2024 – Mar 2024

- **Built** a real-time messaging platform using **Socket.IO** supporting room-based messaging, persistent chat history, typing indicators, online presence, automatic reconnection, and secure user authentication.
- **Designed** an **event-driven backend architecture** with reusable middleware, **JWT-based socket authentication**, centralized exception handling, and modular service layers for maintainable **WebSocket** communication.
- **Implemented Redis Pub/Sub** for horizontally scalable **Socket.IO** communication across multiple Node.js instances, ensuring consistent real-time message delivery and presence synchronization.

Achievements

- **Competitive Programming:** Codeforces Specialist (Max Rating: 1403) and LeetCode Knight (Max Rating: 2100+).
- **Problem Solving:** Successfully solved 1500+ data structures and algorithms problems across platforms including LeetCode, GeeksforGeeks, and Codeforces.
- **Assessments:** AMCAT Certified; scored in the 99th percentile for Quantitative Aptitude and 96th percentile for Logical Reasoning.
